

Renewable Energy Task Force Sign Up

The purpose of the Task Force is to research the feasibility of utilizing renewable energy sources at DBR as an alternative or supplement to commercially provided electricity. The Task Force will consider a minimum of 2 scenarios: 1) power for the full park and 2) power for the common areas and park infrastructure (including water and septic systems). With each scenario, the Task Force will identify (as a minimum) the following:

1. Cost of installation, warranties, and on-going maintenance
2. Equipment, including energy storage, and proposed locations
3. Environmental impacts (for example, tree trimming or removal, visual impacts such as glare or blocked views, impacts on wildlife such as habitat loss or hazards to birds, and/or ground drainage)
4. Potential sources for funding
5. Viability as an income source for DBR
6. Pros and cons of each proposal

The Task Force will prepare a presentation of their findings and recommendations for consideration by the BOD and community.
